

#sotscorp is transforming GANGSTALKING ...by decentralizing it.

HATECOIN™ is a new designer fascism cryptocurrency from Madame FASCHISMÉ that is revolutionizing the gangstalking industry. Before HATECOIN™, evil monopolistic corporations like #sotscorp and the psychoterror arm of the U.S. government dominated the gangstalking market, employing vicious mafia-like tactics such as concerted stalking campaigns against the CEOs of competing gangstalking services.

But no more. With HATECOIN™, you're in control of your own gangstalking, whether as a Target (TI), an Agent, a Researcher, or a Referrer. HATECOIN™s are self-validating, autonomous cryptotokens which carry with them all the personal information, bank account passwords, location data, and other harvested dossier information on the target—everything an anonymous gangstalker needs to find and subtly gaslight you is included, right on the token! This way, referrers can pass along HATECOIN™s to as many potential Agents as possible. To help federate individual grudges into a synthetic, decentralized campaign to target a particular individual, multiple HATECOIN™s targeting the same individual can be merged into larger, more valuable HATECOIN™s containing the dossier information from both source chains.

With HATECOIN™, #sotscorp is removing the middleman from gangstalking! Now anyone can become a gangstalker for anonymous Targets, and anyone can subscribe to their favorite Agents, Referrers, or Target Alerts feeds to receive proximity-triggered Convergence Event invitations, including personal information and trigger words to mutter on-site. Rewards are sent to participating Agents, including BitCoins, random local HATECOIN™s, and entertaining gossip and hacked SMS messages culled from nearby Targets. Convergence Events can be set to trigger anonymously by the Agent hosting the event, so you don't even have to know the victim or why you are stalking them to attend the Convergence, join in the festivities, and get paid! Simply photograph

the QR code left by the hosting Agent to verify your attendance, leave feedback, and rate the host. Fetish objects, as well as witch signs made of small twigs, bones, inexplicably frothy mucous and the like may also be left near these QR markers for later collection by the Special Agent (SA) hosting the event.

#sotscorp is attempting to improve the global impact of gangstalking upon vulnerable populations by dramatically improving scalability and expanding our offerings. #sotscorp's Chief Horror Officer (CHÖ) has this to say about the future of what he's calling Gamestalking (August 2017, Forbes magazine):

"Before, when monopolies and clandestine mafias controlled the gangstalking economy, hiring a team of miscellaneous bag ladies, soccer moms, and demonically-possessed field managers for a targeting operation was difficult and expensive, and it put the corporation—often operating as a grey-market semi-disclosed entity—in delicate legal territory because of the information and currency which had to be exchanged. But now we're opening all that up with HATECOIN™. With HATECOIN™, you don't even need to know your target's name—just snap a photo and share your HATECOIN™, and soon enough, a Researcher will dox the target and add their information to your HATECOIN™, saving you time and parallelizing the entire gangstalking pipeline for crowdsourced contributions.

"This opens up a whole new world of gamification of the gangstalking experience. What before was a confusing, often terrorizing experience of mysterious influence from a distance, #sotscorp vows to transform into a wholly alien experience of appalling abduction into demonic expanses capable of colonizing entire demographics-worth of brains for use in #sotscorp distributed computational efforts at simulating the real-time thoughts of the Old Ones. And, it's fun!

"Together we can put the gangs talkin', in gangstalking!"

Just take a look at this comparison chart, containing just a few of the seemingly limitless improvements and streamlinings of the gangstalking phenomenon enabled by #sotscorp HATECOIN™:

COMPARISON OF GANGSTALKING FEATURES	
GANGSTALKING WITHOUT #SOTSCORP	GANGSTALKING WITH #SOTSCORP HATECOIN™
Confusing, paranoid delusion of persecution and derealization.	Affordable mass-market stalking performed by a crowd-funded army of professional, anonymous Agents.
Subtle, ineffable gestures mystify you and transmit mind-control signals.	Become an Agent or register as a Target to receive basic training in the gestures used in gangstalking. More than half the time, registered Targets who learn the Hypnotic Gesture Protocol (HGP) discover that they were witnessing someone else's gangstalking, and just imagining that it was their own!
Strange devices or implants monitor you and implant foreign thoughts.	As an Agent or Researcher, visit anonymously-designated Drop Sites (with verified trust and safety ratings) to find Unidentifiable Objects (UO's) recovered by Special Agents. Implant the UO in a sleeping or prone Target to get paid!
Fear of real harm causes psychological breakdown, resulting in real harm.	The Sekovia Accords, ratified by 117 countries in 2016, guarantee that gangstalking will only be psychological, never physical, and provide gangstalking victims with a number of human rights, including the right to know whether or not they are being stalked, and the right to demand gangstalking services using the Law of Attraction hotline system (detected by automated psychic antennas connected to the HATECOIN™ chain).
Gangstalking services are overpriced and monopolized by a few key industry players (CIA/Facebook, Microsoft, Google/NSA, and Siri).	Literally anyone can become an Agent, Target, Referrer, or Researcher by simply cloning the HATECOIN™ wallet Git repository and running the app. Anyone can initiate a gangstalk by minting a new HATECOIN™ containing embedded seed info on their intended Target, and filling it with BitCoin to fuel payouts to players.

COMPARISON OF GANGSTALKING FEATURES	
GANGSTALKING WITHOUT #SOTSCORP	GANGSTALKING WITH #SOTSCORP HATECOIN™
Neighborhoods with lower socio-economic status (SES) often find gangstalking provider services difficult to access. Problems with gang-related crime, including local gangs employing gangstalking without following the Sekovia Accords (see above), make gangstalking in these regions dangerous for both client and provider.	#sotscorp is dedicated to making gangstalking accessible and affordable for all, regardless of race, creed, sexual orientation, SES, or other identifying characteristics. In fact, the next version of HATECOIN™ will rely on these identifying characteristics to perform facial recognition (to track Targets) and to expand Targets to include groups and categories. These parameters will be defined using HateSpeech™, a new self-propagating token-based encrypted scripting language from #sotscorp.
Cosmic horrors are naïvely denied and repressed.	HATECOIN™ is horror itself, made tangible. Special Agents, accessed through HATECOIN™'s lattice encryption framework, direct Agents and coordinate their efforts by publishing new HGPs (see above). Gradually, full apocolypse encloses the Target, ensuring a quick return on investments of loosh made by harried beings from the outer reaches beyond all sanity and reason.
The machinations of gangstalking are opaque and anxiety-producing.	The machinations of gangstalking are made break-inducingly lucid through public disclosure and helpful, crowd-funded workshops and tutorials teaching basic gangstalking skills and metaphors (HGPs). The unscreened horror of processing the hyperobjective Big Thoughts of the elder gods drives all users of HATECOIN™ to fuse into a single ecstatic body, writhing in an intensive pleasurable absence known as A-death. Street parties of gamestalkers flood major metropolitan areas in unison, intoning a single unspeakable syllable (™).
